Mobil DTE 10 Excel Series energy-efficient hydraulic oils — specially formulated to address the demands of the latest high-pressure hydraulic equipment — are engineered to help you reduce your power consumption and increase your machine output. Expect the following benefits:

- **Quantifiable hydraulic efficiency** that can lead to reduced power consumption. Plus, excellent high- and low-temperature viscometrics allow for a wider, effective temperature range of operations.
- **Long life and durability** thanks to excellent shear and thermal stability — for maximum equipment protection and performance at high- and low-temperature extremes.
- **Systems stay free of deposits for up to 3x longer** than competitive fluids in demanding Mobil Hydraulic Fluid Durability (MFHD) testing, allowing for clean, longer, productive operation of hydraulic systems.
- **Environmental considerations** with acute and chronic studies indicating no significant aquatic toxicity and eliminating classification for environmental hazard.

Note: NOT TO SCALE.
